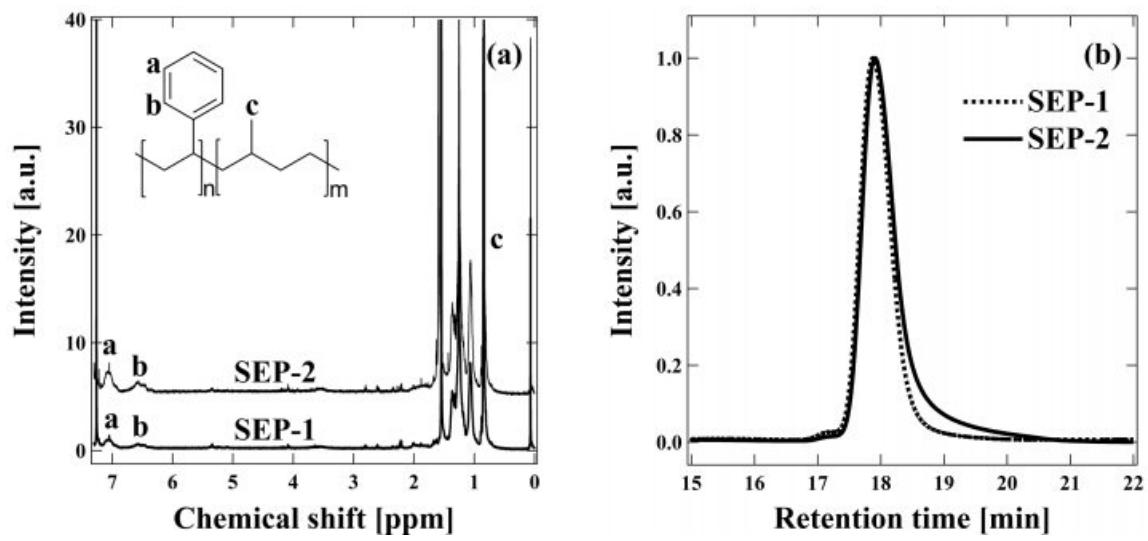

Figure S1. (a) ^1H -NMR spectra for SEP-1 and SEP-2. (b) GPC results of SEP-1 and SEP-2. This confirms that both SEP block copolymers are narrowly dispersed in molecular weight.

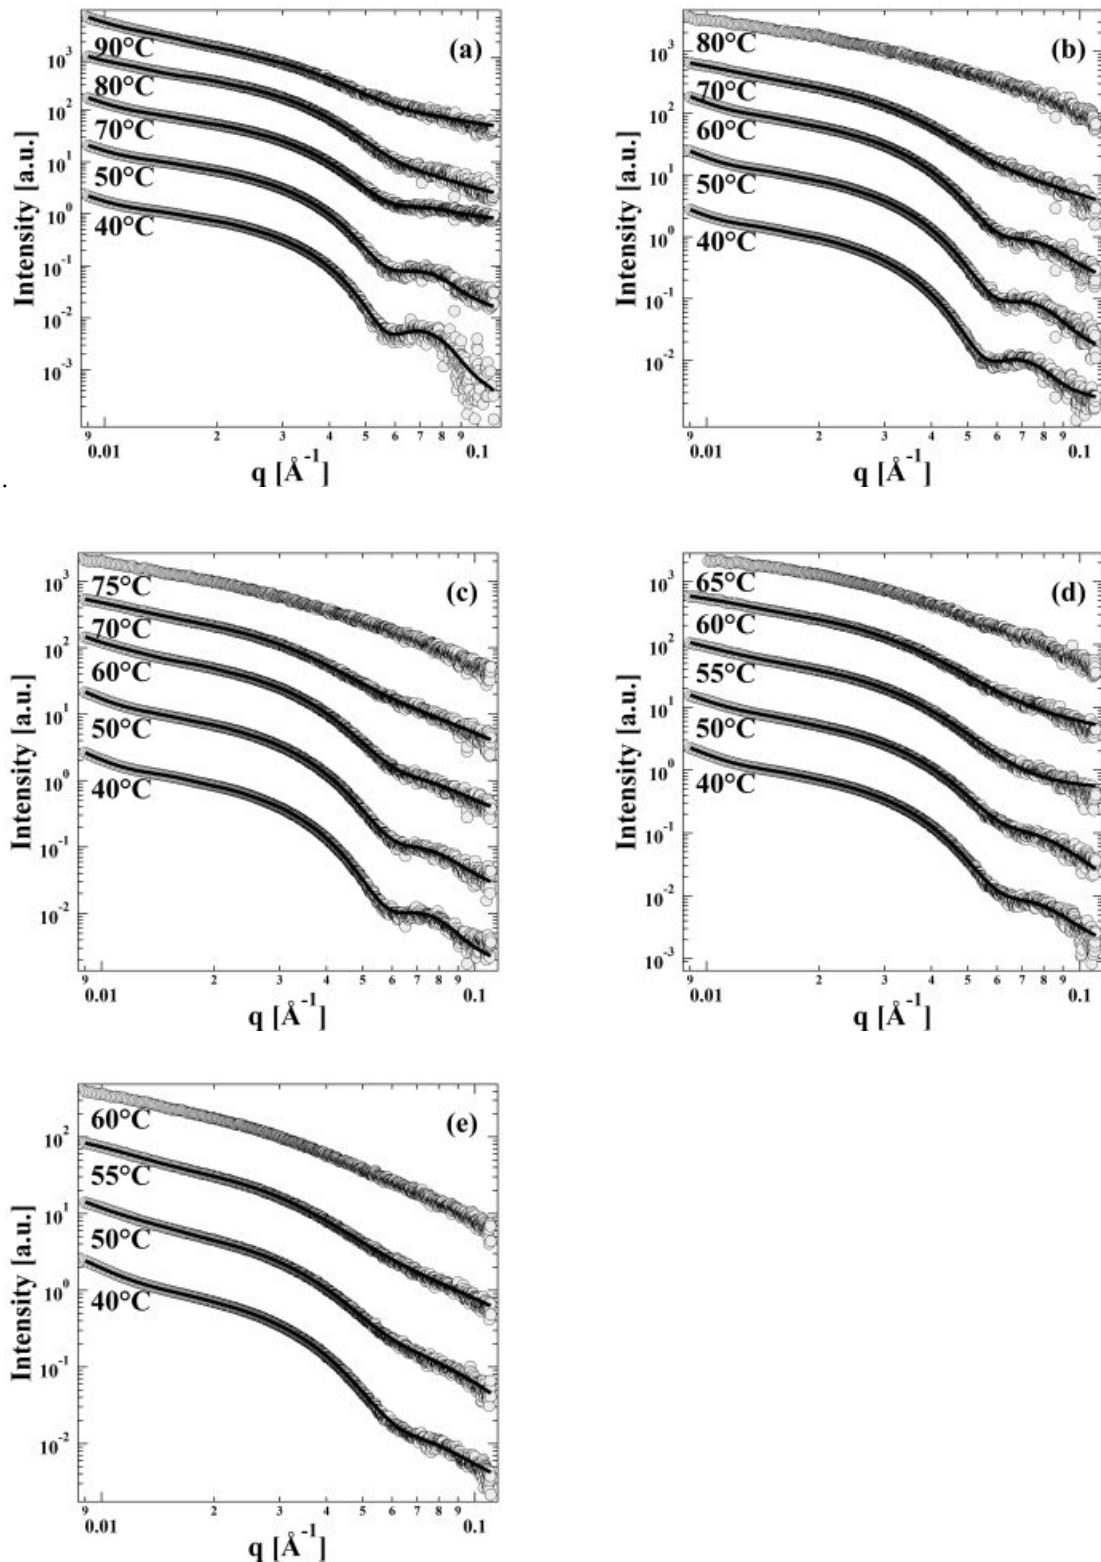

Figure S2. SAXS profiles for SEP -1 in *n*-alkanes; (a) *n*-hexadecane, (b) *n*-tetradecane, (c) *n*-dodecane, (d) *n*-decane, and (e) *n*-octane. Solid curves represent the best fit to the detailed BCP micelle model. Data are vertically shifted for clarity.

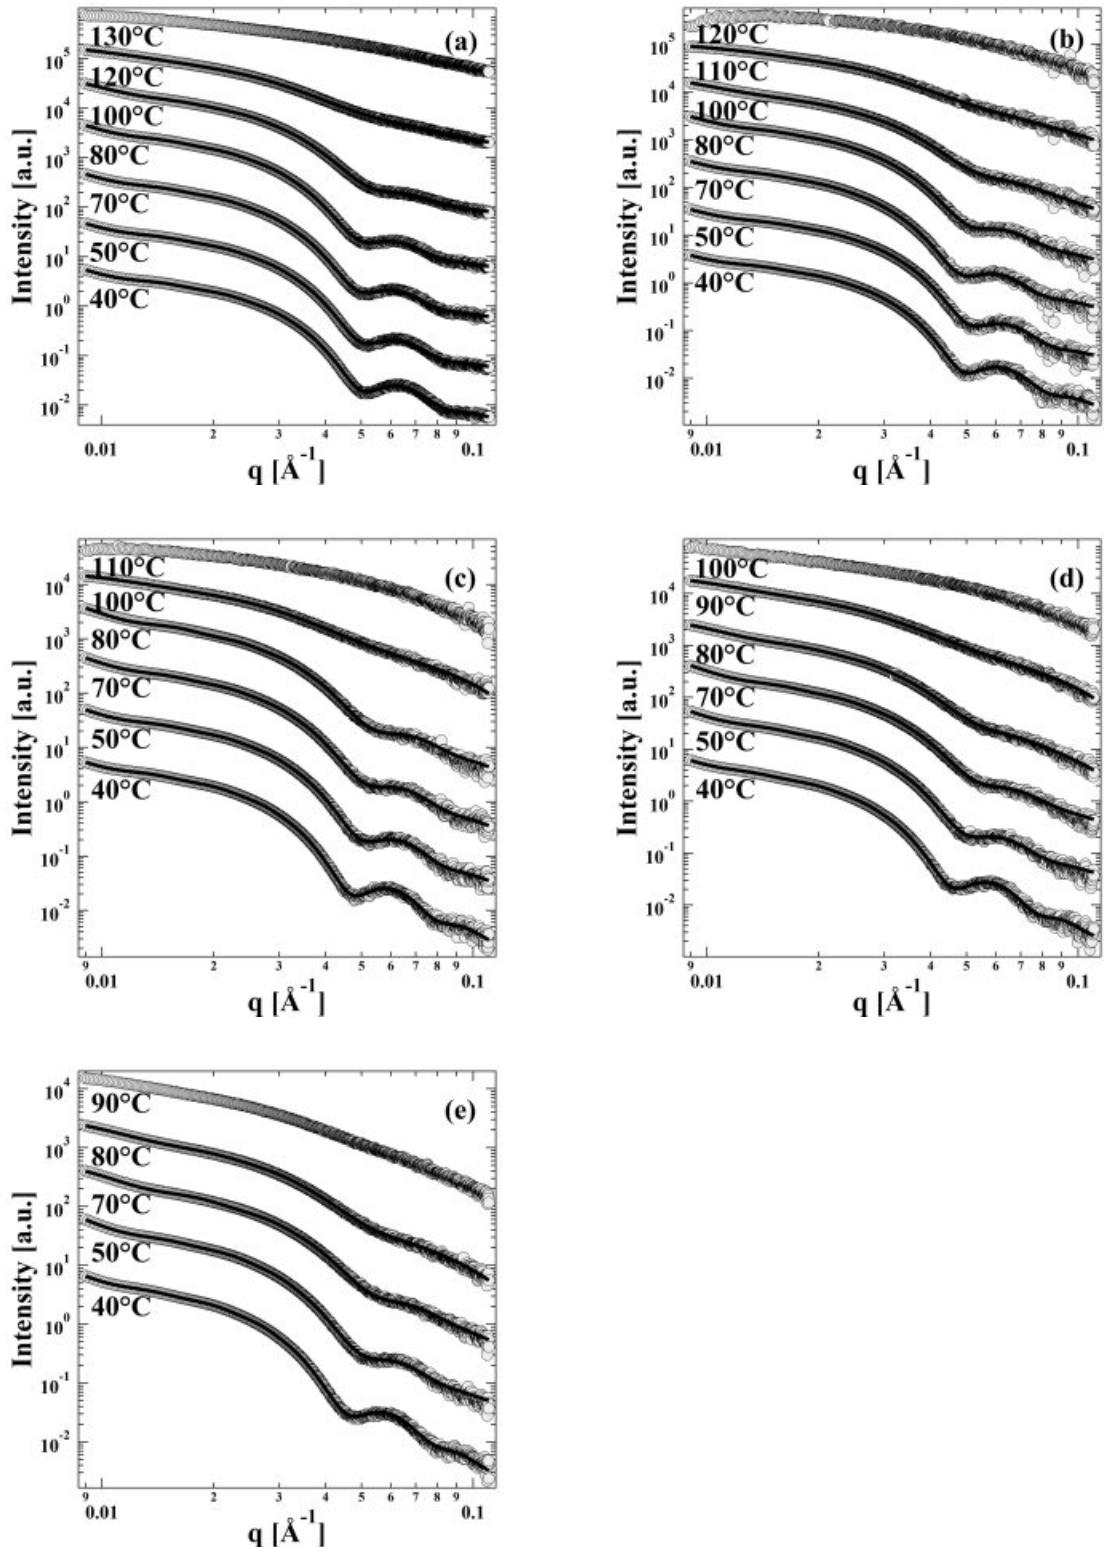

Figure S3. SAXS profiles for SEP-2 in *n*-alkanes; (a) *n*-hexadecane, (b) *n*-tetradecane, (c) *n*-dodecane, (d) *n*-decane, and (e) *n*-octane. Solid curves represent the best fit to the detailed BCP micelle model. Data are vertically shifted for clarity.

Table S1. SAXS fitting results of SEP-1 in *n*-alkanes.
